

Power Detective®

*Generate an analysis of power consumption
– so you can save money!*

Download all data from the SD card to your computer and view your consumption in Excel.

This is how you generate a power consumption analysis with the new Power KWh Detective.

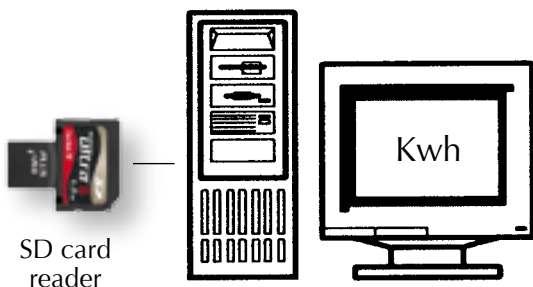

There are two systems that can be used:

1 Wireless remote reading of power consumption to a data box with SD card.
If you want to measure the power consumption of different appliances i.e. refrigerator, television, freezer, water bed, coffee machine, computer, radio etc., then you need around 10 Power Kwh Detectives and 1 Power Meter Wireless Data Box.

2 Power KWh Detective with a SD card.

Example of data from SD card:

Time	Watt	KWh	Volt	Amp	cosφ
26-09-2007 07:00	667.1	0.00	228	2.702	0.99
26-09-2007 07:01	633.6	0.00	226	2.574	1.00
26-09-2007 07:02	625.9	0.00	228	2.593	1.00
26-09-2007 07:03	586.0	0.00	227	2.593	0.99
26-09-2007 07:04	629.1	0.00	227	2.588	0.99

Extra equipment

- Connection and disconnection relay
- Option for web server (remote reading)
- Option for USB port
